Timber Curtain Wall System

1435 Pioneer Street · Brea CA 92821 · 562.905.3200 120 Sand Island Access Road #2 · Honolulu HI 96819 · 808.842.1144 CA Lic. #475891 · HI Lic. #C 30428 **revealwd.com**

- Alternative to standard aluminum storefront/ curtain wall systems
- Structural wood mullions on the interior, low-maintenance aluminum caps or wood caps on the exterior
- Ideal system for high-end residential, boutique retail and hospitality projects
- Nearly unlimited configurations with multiple glazing, mullion species and cap options
- Various installation options allow for curtain walls to span multiple stories and incorporate into any building system
- A turn key, tested solution: all systems can be sold with third-party engineering and installation to ensure proper performance

Timber Curtain Wall System Product Parameters

Timber Curtain Wall

*All parameters are subject to project specifications and engineering review

Max System Height	30' (Or more if spanning multiple floors)
Max System Width	Unlimited
System Depth	Based on wind load/structural criteria
System Thickness	56mm (2 ³ / ₁₆ ")
Integrated Venting Units	Any window or door (Swing, sliding, folding, etc.)
Radius Options	Segmented radius in angles of 1°-45° from the glass

Technical Overview

The standard **Timber Curtain Wall** system consists of a non load-bearing structural wood interior with a triple layer of interior gaskets and precise inner sealing channel, supplied by **RAICO**. The base profile wood is fixed with a direct screw connection. A variety of exterior caps are available, which also assist to channel water away from the glazed openings.

The interior wood components are 56mm $(2\sqrt[3]{16''})$ in thickness, with a variable depth depending on the structural needs of each opening. A structural core is used for stability and consistency in the interior wood components with 1/4'' veneer standard in a variety of wood species. Vertical and horizontal lengths can be configured to create nearly any desired combination and span multiple stories. Angled corners and segmented radius systems are also available.

The **Timber Curtain Wall Lite** is a cost-effective, elegant solution for less complex, single story applications. With narrow face dimensions of $45 \text{mm} (1^{3}/4'')$ at the perimeter and $54 \text{mm} (2^{1}/8'')$ at the common mullions, this system is perfect for most residential applications. Based on the overall size of the opening and depending on structural limitations, the system can either be shipped pre-assembled for ease of installation, multiple pre-glazed systems can be mulled together, or multiple systems can be field-glazed to preserve common sight-lines.

Convenient and Customizable Options

Interior wood mullion options include:

- Custom wood species
- Solid engineered lumber (LVL, PSL, etc.)
- Lamboo[®] (Engineered bamboo)
- Custom pre-finishes available

Standard glazing options include:

Curtain walls can be glazed with nearly any type of glass or panel including single, double or triple-glazed units. Glazing thickness must be consistent throughout the elevation. Corner or bent glass also available.

Exterior cap options include:

- Wood cap (Custom pre-finish available)
- Aluminum cap (Custom Kynar™ or clear/bronze anodized finish)
- No cap (Standard Timber Curtain Wall only)

Other options:

 Exterior louvers, motorized operables, switch glass, integrated millwork and curved/shaped wood interiors

Timber Curtain Wall Lite

10' (Or more with multiple mulled systems) 20' (Or more with field-glazed or multiple mulled systems) Based on wind load/structural criteria 45mm ($1^{3}/_{4}$ ") perimeter mullions 54mm ($2^{1}/_{8}$ ") common mullions Any window or door (*Swing, sliding, folding, etc.*)

Slide & Seal[™] Door System

Patented system slides and seals automatically without the heavy lifting

- Innovative hardware automatically seals door in closed position
- No more bulky, expensive handles needed to operate and seal each panel manually
- Panels disappear flush into pockets
- Adjustable rollers and hardware for ease of service and installation
- Can be fully automated for the ultimate in hands-free convenience
- Durable aluminum exterior with warm wood interior, in your choice of finishes and species

1435 Pioneer Street · Brea CA 92821 · 562.905.3200 120 Sand Island Access Road #2 · Honolulu HI 96819 · 808.842.1144 CA Lic. #475891 · HI Lic. #C 30428 **revealwd.com**

Slide & Seal[™] AW6700 Product Parameters

Max Frame Height	144″
Min Panel Height	60"
Min Panel Width	311/2"
Max Panel Width	108" (Up to 65 sq. ft. of glass)
Max Opening	30' per side (Larger openings available)
Muntin Width	11/4" SDL
Panel Thickness	2 ⁵ / ₈ "
Screen Thickness	1 ³ / ₄ " (Aluminum or wood)
Stile/Rail Width	3 3/4"
Configurations	Fixed, Pocketing, 90° Corner

Convenient and Customizable Options

The Slide & Seal[™] door system has been tested for thermal, air, water and structural performance, and comes with a variety of wood species, glazing and hardware options.

Standard wood species include:

- Pine
- Vertical Grain Douglas Fir
- Sapele Mahogany
- Custom species and finishes available

Standard glazing options include:

- 1¹/₄" Tempered Low-E insulated glass
- Custom glazing, tinted and impact glass are available

Aluminum finishing options include:

- Custom color-matched Kynar[™]
- Anodized (Clear or bronze)

Edge detail:

- Exterior aluminum: Contemporary
- Interior wood: Traditional or contemporary

Other options:

- Keyed locks, aluminum or wood screens, and intermediate vertical or horizontal rails
- Track options include stainless steel Flush Track (Standard) and our patented stainless steel Flush Drain Track
- Prep for automation available

Proprietary Recessed D-Handle

- Only one D-Handle per lead panel required to operate entire system
- Handle remains recessed in face of the panel until pivoted into position
- Sand-cast from bronze and available in Satin Nickel or Oil-Rubbed Bronze finish (Custom finishes available)

Slimline Doors

The highly-desirable "warm contemporary" look can now be achieved with the Slimline door by Reveal Windows & Doors. The Slimline combines the richness and thermal performance of solid wood doors with the sleek, minimal sight-lines typically associated with aluminum or steel products.

By increasing the panel thickness to $3 \frac{5}{16}$, the stiles and rails can be kept to a mere 3" wide and remain structurally stable in systems up to 10' high. The European-style Slimline was designed and tested for the U.S. market with features such as integrated metal nail fin for ease of installation.

Add M-Series windows by Reveal Windows & Doors as matching transoms and sidelites, or incorporate the Slimline into a Timber Curtain Wall system as an integrated swing door unit. The Slimline door can be customized with a wide variety of wood species, glazing, hardware and interior/exterior finish options.
